SUMMARY

Junior full-stack engineer working in Node.js, TypeScript, Express and React. I work AI-first: I use Claude Code every day with my own setup (persistent memory, custom skills, hooks, MCP servers and scheduled agents), and I review, test and understand everything it produces. I ship to production for small-business clients, handle their change requests directly, and verify each fix live before I call it done. English B2. I prefer writing things down and working async.

CLIENT WORK

Freelance Developer, small-business **clients** Sep 2026 - Present

- **Self-service product catalog for a neighborhood store** (lodefran-kiosco.vercel.app): mobile admin panel where the owner adds products with a phone photo, price, category and out-of-stock toggle. The public site has search and builds a WhatsApp order with the total. Vercel serverless API + Vercel Blob.
- **Debugged stale data in production:** the Blob CDN kept serving an overwritten file for up to 60 s, so edits did not show up. Fixed it with immutable versioned files plus a pointer updated through conditional writes (ETag / if-match). Edits now appear immediately and two saves at the same time cannot overwrite each other. Unit tests + a 25-step end-to-end script.
- **Live menu site for a bar** (bar-azul.vercel.app): I take the owner's change requests (prices, new items, hidden dishes) and ship them the same day, behind a test suite, then check each one in production. One merge did not trigger the production deploy; I found it while checking live and promoted the build myself.

PROJECTS

TaskFlow API + client: task and project management TypeScript | Express | MongoDB | React

- 55 integration tests in 5 suites against in-memory MongoDB, ~97% statement coverage. GitHub Actions runs type checks, tests and the build on every push. Multi-stage Docker image.
- JWT with refresh-token rotation, bcrypt, Zod validation, Helmet and rate limiting. Live React client with a guest mode so visitors can try it without signing up.

Code Reviewer Agent: AI code review CLI Claude Agent SDK | Node.js

- Takes a git diff and reports findings on bugs, security and clarity; a human makes the final call on every finding.

Personal AI automation Claude Code | MCP | scheduled cloud agents

- A cloud agent runs every morning: it checks several job boards, opens every link to confirm the posting is still live, and sends me one email digest. My Claude Code setup has persistent memory, custom skills, hooks and MCP servers (Gmail, Calendar, GitHub).

Turnero API TypeScript | Node.js

- Appointment API with an availability engine, cron email reminders and 167 tests in 9 suites.

EDUCATION & OTHER EXPERIENCE

Full-Stack **Developer program, Coderhouse** Online

Host, The Farm restaurant | Park City, Utah, USA Dec 2022 - Mar 2023

- Front-of-house role on a Work and Travel program, dealing with US customers every day in English.

SKILLS

Backend: Node.js, Express, TypeScript, JavaScript, REST APIs, webhooks, MongoDB/Mongoose, JWT, Zod, serverless functions (Vercel)

Frontend: React, Vite, HTML, CSS, responsive and mobile-first UI

Quality & delivery: Jest, Supertest, end-to-end scripts, GitHub Actions, Docker, docker-compose, Vercel, Render, Git

AI: Claude Code, Claude Agent SDK, MCP, prompt and context design, reviewing and testing AI-generated code

Languages: Spanish (native), English (B2)
