

PROFILE

Junior full-stack JavaScript/TypeScript developer with a backend focus. I build and deploy complete REST APIs with Node.js, Express and TypeScript — JWT auth with refresh-token rotation, layered / clean architecture, integration testing (Jest + Supertest), OpenAPI docs and Docker. I also work with PostgreSQL and Python / FastAPI. Every project below is deployed and reachable. Looking for my first remote or hybrid junior role.

PROJECTS

Code Reviewer Agent

AI · CLI

GitHub

CLI that reviews your git changes like a senior — bugs, security and clarity — built on the Claude Agent SDK. Read-only tools (Read/Grep/Glob) with controlled permissions via canUseTool, streaming the review live to the terminal.

Node.js

Claude Agent SDK

ESM

CLI

TaskFlow API

Backend · TypeScript

Live · GitHub

Task-management REST API migrated entirely to TypeScript. JWT auth with refresh-token rotation, strict layered architecture (Route → Controller → Service → Repository) and 30 integration tests running in CI.

TypeScript

Node.js

Express

MongoDB

JWT

Jest

Docker

Ecommerce API · Polyglot

Backend · Microservices

Live · GitHub

Same ecommerce domain solved in three technologies: Node + MongoDB, a relational PostgreSQL layer (transactions, SELECT ... FOR UPDATE to decrement stock without race conditions) and a Python / FastAPI analytics microservice over the same data.

Node.js

Express

MongoDB

PostgreSQL

Python

FastAPI

Scalable Backend API

Backend

Swagger Docs · GitHub

Users, pets and adoptions API with full OpenAPI 3 documentation (Swagger UI), Faker-based mocking endpoints to generate test data, bcrypt password hashing and integration tests with Jest + Supertest.

Node.js

Express

MongoDB

Swagger

Faker

Jest

Docker

Clean Architecture API

Backend

Live · GitHub

Node.js API structured with the Dependency Rule: entities, use cases and adapters fully decoupled from the framework and the database.

Node.js

Express

Clean Architecture

MongoDB

TaskFlow Client

Frontend

Live · GitHub

React + Vite client for the TaskFlow API: token-based auth flow, task management UI, polished empty states and production deployment on Vercel.

React

Vite

JavaScript

SKILLS

Backend	Node.js, Express, TypeScript, Python, FastAPI, MongoDB, PostgreSQL, Mongoose, JWT, REST APIs, Clean Architecture, Claude Agent SDK
Frontend	React, Vite, JavaScript, HTML, CSS, Firebase
Testing & Deploy	Jest, Supertest, Swagger / OpenAPI, Docker, Vercel, Render, MongoDB Atlas, Git / GitHub, CI (GitHub Actions)

EDUCATION & LANGUAGE

Full-Stack Developer — Coderhouse	English — B2 Upper-Intermediate	Comfortable reading docs, writing commit messages and async communication.
