PROFILE

Junior Full-Stack JavaScript Developer with a backend focus. I build complete web applications using Node.js, Express and MongoDB — with real production deployments, JWT auth, layered architecture and integration testing. I'm looking for my first remote or hybrid junior role.

PROJECTS

TaskFlow API

Backend

[Live](#) · [GitHub](#)

Task management REST API with JWT auth + refresh token rotation, strict layered architecture (Route → Controller → Service → Repository) and 30 integration tests.

Node.js Express MongoDB JWT Jest Docker

Scalable Backend API

Backend

[Swagger Docs](#) · [GitHub](#)

Users, pets and adoptions API. Joi validation on every route, full OpenAPI 3 documentation with Swagger UI, deterministic seed and E2E test suite.

Node.js Express Joi Swagger Jest Docker

Clean Architecture API

Backend

[Live](#) · [GitHub](#)

Node.js API structured with the Dependency Rule: entities, use cases and adapters fully decoupled from the framework and the database.

Node.js Express MongoDB Clean Architecture

TaskFlow Client

Frontend

[Live](#) · [GitHub](#)

React + Vite client for the TaskFlow API. Token-based auth flow, task management UI, empty states and production deployment on Vercel.

React Vite JavaScript

MateStore

Frontend

[Live](#) · [GitHub](#)

E-commerce built with React and Firebase: product catalogue, shopping cart and checkout.

React Firebase Vite

SKILLS

Backend	Node.js, Express, MongoDB, Mongoose, JWT, REST APIs, Clean Architecture
Frontend	React, Vite, JavaScript, HTML, CSS, Firebase
Testing & Deploy	Jest, Supertest, Swagger / OpenAPI, Docker, Vercel, Render, MongoDB Atlas, Git / GitHub

EDUCATION & LANGUAGE

Full-Stack Developer

English — B2 Upper-Intermediate

Coderhouse

Comfortable reading docs, writing commit messages
and async communication
